# Exercize 7 Section 8.4 ISL

In the lab (section 8.3), we applied random forests to the `Boston` data using `mtry=6` and using `ntree=25` and `ntree=500`. Create a plot displaying the test error resulting from random forests on this data set for a more comprehensive range of values for `mtry` and `ntree`. You can model your plot after Figure 8.10

.

Describe the results obtained.
